

CST Tech News

What's New

2020 is going to be an amazing year!

How do I know? Because we have put together an amazing stack of tools and services designed to meet all our clients' needs along with an amazing team that is here to support you. Our mission is to ensure you never have to worry about your technology.

2020 is also a special year for us because we will be celebrating 20 years in business. I would love to tell you that the past twenty years have been easy but that would be a lie. Technology is an ever-changing field so sitting idle or doing the same thing repeatedly is impossible. Technology is a constant learning process and everyone at CST takes that very serious. We do not have any two clients alike which means we are diverse, and it is something we are very proud of.

CST is growing and we are proud to say we are bringing on new clients every day. Security will be a primary focus as cyber security laws get more and more stringent. We will focus on training your employees on how to better identify risk and we will continue to protect your technology all without disrupting your day. Also, be watching for our monthly Lunch and Learn sessions where you get firsthand information to help you make better technology decisions.

Just know that CST takes pride in our service. It is where our focus is every single day. Cheers to an incredible 2020 for all of us.

Our Mission: To provide outstanding technology services to our customers allowing them to focus on their business.

3 Places You Should NEVER Cut Corners With IT

We all know how easy it is to cut corners in business; we've all done it somewhere. But we also know we shouldn't. You'll eventually have to face the consequences, whether they're small or large. The same applies to IT. When you cut corners, the consequences to your business can be major. Here are three places where you never want to cut costs.

EQUIPMENT

You want to set up a wireless network at the office, but you don't want to spend more than \$50. So, you spend that \$50 and call it good. While this new router may deliver a wireless signal that reaches every employee, you could be making a huge mistake that may cost you dearly.

Routers are a good example of

technology you want to put extra thought and money into. You want equipment that not only makes sense for your business's network needs but will also perform reliably and securely. Cheap routers aren't known for their security features. You want something that will compliment the firewalls or security software you have in place (and you *should* have them).

This same idea applies to all other equipment, as well as software. When you cut corners, there's a good chance you'll be opening your wallet again to fix the problem in the near future. On top of that, it puts your data at risk if you're buying cheap, potentially faulty equipment. Do research, ask questions and work with an experienced IT company to make sure your equipment is up to snuff.

Continued from pg.1

GROWTH OF YOUR BUSINESS

Whether you're just getting started or you've been in the business for a while now, you always want to invest in hardware and software that will scale *with* your business. It's safe to say that most businesses want to grow, which means adding more customers and more employees. When that's the plan, scalability becomes a big deal.

Part of it comes back to the first point: cheap equipment isn't typically designed with scalability in mind. It's a quick-fix investment. It's not made for the long haul. Where do you plan on being in five years? What are your growth goals? You have to ask these kinds of questions to determine what kind of investment you need to make, whether it's in billing software, customer service software, workstations or your network infrastructure.

If you don't think about scalability, as soon as you start really growing, you'll be hit by growing pains. You'll have to reinvest in technology, and you'll be spending far more

“Whether you're just getting started or you've been in the business for a while now, you always want to invest in hardware and software that will scale with your business.”

than you needed to, once for the first investment (on non-scalable tech) and once for the second investment (to catch up with your growth). But because your business has grown since that initial investment, you'll be left with a hefty bill – for much more than you paid the first time. Don't make this mistake!

DATA SECURITY

Just because your data is locked away in the back room doesn't mean it's safe. For one, small businesses are the biggest targets for cybercriminals because most small businesses skimp on data security, making it easy for cybercriminals to steal data and cause a lot of problems.

To make matters worse, if you get hit with a cyber-attack or data breach, it can be incredibly difficult to recover, and many small businesses *don't* ever recover. They struggle for a few months before finally closing their doors.

You need to invest in firewalls, malware protection, data encryption, data backups, password managers and, as mentioned above, good equipment that is designed with reliability and security in mind. And no, you don't have to figure it out by yourself. It can be a lot, and as you dive into the topic of data security, you'll have questions.

This is exactly why you want to pair up with an experienced IT company that specializes in security. It is very hard to run a business and try to be a data security expert at the same time. Thankfully, you don't have to do that. You can get the most out of your equipment, you can be prepared for future growth and you can be ready for the threats to your data! You just have to make that first investment.

Concerned about the safety and security of your online identity? You should be!

If you've been following the latest news in cybersecurity, you know that attacks have only continued to grow in both size and sophistication. However, you might not be aware that small and mid-sized businesses like yours are the most targeted by Dark Web criminals. Would you be among the 60% of SMBs that would be bankrupted by the average cost of a data breach?

If you are reading this, you are eligible for a free and comprehensive Dark Web scan to identify how many of your credentials have been compromised. Attend one of our Lunch & Learn monthly meetings to get your FREE Scan instantly or contact us today to make an appointment for yours! **518-483-4100 or 941-249-3520!**

January's Lunch and Learn

As we start out the new year, something we are very excited to continue is our

Lunch & Learn monthly meetings.

This month, we will be discussing the end of Windows 7 and Windows Server 2008. How important is it? Will your computer stop working? The deadline for upgrading is January 14th. After this date, Windows 7 & Server 2008 will no longer be supported making you vulnerable to viruses and attacks.

January's event will take place January 28th, at Hosler's Restaurant in Malone from noon to 1pm. Come have lunch on us and let us teach you something new. We know information is key and you can't make great technology decisions without it. Remember, this is designed to take up only the normal lunch hour, so we will start exactly at noon. You must RSVP as we limit the number of seats to twenty. Please RSVP by January 24 to Jess@cstsupport.com or by calling our office at 518.483.4100. We look forward to seeing you there!

5 Keys For Building Effective Multilocation Teams

Technology has made it easier than ever to set up multiple offices around the country, but it also presents new challenges for business leaders: how to build and sustain a positive and productive company culture while managing geographically dispersed teams.

When managing offices in multiple locations, the difference between success and failure often can be traced to the commitment that leaders have in fostering a company culture that embraces open, honest communication, accountability and alignment. Here's how you do it.

1. HIRE RIGHT.

When hiring (or promoting from within) to manage remote office locations, make sure candidates have what it takes to work independently and in a less traditionally structured environment. The nature of working remotely requires team members to be self-starters. They also need to have the knowledge and confidence to solve challenges on their own because they won't be able to walk into your office for guidance.

2. LOOSEN THE REINS.

As a leader, you're ultimately responsible for the success of your team. But once you've hired your team, you have to release control and let team members do their jobs. Establish key performance indicators (KPIs) to set goals, and identify steps required to accomplish those goals, but resist the temptation to micromanage. Warren Buffett said it best: "Hire well. Manage little." This will afford you time to focus on other projects. Not only that, the trust you show will breed loyalty in your team.

3. CONDUCT DAILY TEAM MEETINGS.

Daily huddles provide team members with the opportunity to quickly share their meeting schedules and news that the whole team should hear. Each person can also report on progress toward individual and company quarterly goals and note the top priority for the day. Just because you have an office in another state doesn't mean

those team members shouldn't participate. Morning meetings, even via videoconference, can build team spirit, share information, foster accountability and provide quick solutions.

4. DON'T NEGLECT ONE-ON-ONE MEETINGS.

No matter the size of your organization or the number of remote locations, it's essential for each team member to have one-on-one time with a manager or leader. Absence does not make the heart grow fonder, so hold these meetings at least monthly and preferably biweekly. Implement a system that allows supervisors to track the progress of team members' work, provide a listening ear for any concerns and help them set goals.

5. PUBLICLY RECOGNIZE ACHIEVEMENTS.

As leaders, it's up to us to encourage team members to be the best they can be and to recognize excellent work. Research has shown a direct correlation between workplace appreciation and productivity and engagement. A Salesforce study found that team members who feel their voices are heard are 4.6 times more likely to feel empowered to perform their best work. Create an online kudos board with an app like TINYpulse where you and fellow team members recognize peers for their accomplishments.

Andy Bailey is the founder, CEO and lead business coach at Petra, an organization dedicated to helping business owners across the world achieve levels of success they never thought possible. With personal experience founding an Inc. 500 multimillion-dollar company that he then sold and exited, Bailey founded Petra to pass on the principles and practices he learned along the way. As his clients can attest, he can cut through organizational BS faster than a hot knife through butter.

■ Don't Let This Destroy Your Business

Malware can be a confusing word. It covers a lot of different things, including viruses, worms, spyware, ransomware, Trojan horses and more. Malware in any form can destroy data, take control of your computer and cause major headaches.

Most small businesses aren't equipped to handle a devastating malware attack. Even a simple virus corrupting your hard drive can set you back a few days, and that's only if you act quickly to contain and eliminate it. Some forms of malware, including those that scan and steal data from your systems, can end up destroying your business entirely.

Websites and networks are attacked every single day. By some estimates, there is a cyber-attack every 25 minutes – a number that increases in frequency every year. The best thing you can do is educate your

employees about the dangers of malware and prepare your business for an attack. *Small Business Trends*, 10/12/2019

■ 3 Telltale Signs Your Company Culture Is Toxic

1. There's a high turnover. If your business is a revolving door of employees, you've got a big (and very costly) problem. A high churn rate is a clear sign your company culture is broken. It's almost always a top-down issue: management needs to ask themselves what they are doing wrong. If it's not fixed, it can destroy a company.

2. Everyone's confused.

Communication is key, and when management can't clearly communicate strategy or they manage behind closed doors, employees suffer. It can lead to serious mistrust between employees and management, and projects are prone to falling apart.

3. Management is purely reactive.

When an employee makes a mistake, punishment isn't the answer. Ideally, it should be a learning opportunity. When managers swiftly react, and suddenly there's a bunch of closed-door meetings, this equals stress for everyone else. If it gets to the point where employees don't bring up problems with the management team, this means there is a complete lack of trust and employees fear the backlash. *Inc.*, 10/20/2019

■ 4 Tips To Successfully Lead Your Team To New Heights

1. Keep communication open (and honest).

Whether you talk face-to-face, hold regular meetings or rely on chat software, always have a communication option open between everyone at the company in some capacity.

2. Be willing to delegate. You can't do it all yourself. You hire people with experience to help your business succeed, so let them shine!

3. Anticipate conflict. Conflict can't be avoided, but it can be addressed before it becomes an issue. Train your team on ways to deal with conflict among themselves, with customers and beyond.

4. Embrace mentoring. The best leaders are also mentors to people around them. If someone leans on you for guidance, embrace it! *Business Insider*, 10/18/2019

"You would not believe the battery life on this thing. I've been reading it for weeks!"
